TWENTY FIRST ANNUAL MEETING

APRIL 17, 18, 19, 1964
SHOREHAM HOTEL
WASHINGTON, D. C.
SPECIAL EVENTS

THURSDAY

Pre-meeting program at the National Institute of Dental Research—Lunch—Afternoon T.V. demonstration by Dr. John I. Ingle

THURSDAY EVENING
Evening Registration and Social Hour
Palladium Room
6:30 - 8:30 P.M.

FRIDAY
Luncheon With Learning
Palladium Room

SATURDAY
Cocktail Hour 6:30 P.M.
Banquet 7:00 P.M.
Palladium Room

All tickets for banquet and luncheon available at Registration desks.
WELCOME

TO THE TWENTY FIRST ANNUAL MEETING
of the
AMERICAN ASSOCIATION OF ENDODONTISTS

With this twenty first meeting in the Nation’s Capital, a new era begins. The results of the untiring efforts of many of our men have been realized and Endodontics is now recognized as a specialty by the American Dental Association.

It is fitting that this new era of Endodontics should be greeted by one of the finest programs we have ever assembled. The officers, committee chairmen and committee members are to be congratulated on the quality and scope of their work.

We extend our appreciation to each clinician and essayist for their participation in this program.

I hope you will partake fully of the opportunity to learn as well as to enjoy the fellowship of the social events planned. If you do, you will long remember the twenty first meeting of the American Association of Endodontists in Washington, D. C.

JAMES H. SHERARD, JR., President
Officers of the
AMERICAN ASSOCIATION OF
ENDODONTISTS

JAMES H. SHERARD, JR. ........................................... President

FRIDAY MORNING, APRIL 17, 1964

8:30-9:30 REGISTRATION

Terrace Banquet Room

9:00-9:15 Greetings
J. H. SHERARD, JR., President
Keynote Speaker

Moderator: ADEEB THOMAS, Birmingham, Alabama
9:15-10:00

Subject: INTEGRATING PERIODONTIC AND ENDODONTIC THERAPY IN CLINICAL PRACTICE

Essayist: NEAL W. CHILTON, D.D.S., M.S., Clinical Professor of Periodontics, Temple University, School of Dentistry, Associate Professor of Preventive Medicine, Temple University, School of Medicine.

Synopsis: This paper will cover differential diagnosis of periodontic and endodontic lesions; therapy of these combined lesions; periodontal techniques which can enable successful endodontics to be performed.

10:00-11:00

Subject: CYSTS AND CYST-LIKE DISEASES OF THE JAWS

Essayist: EDWARD V. ZEGARELLI, A.B., D.D.S., M.S., Director of the Division of Stomatology, School of Dental and Oral Surgery, Columbia University; Chairman Committee on Dental Research, Columbia University.

Synopsis: The presentation will include discussion of a variety of jaw bone diseases each of which simulates cystic disease when examined radiographically. Although the nature of these entities will be discussed, particular emphasis will be placed on the methods of establishing a conclusive diagnosis.

11:00-12:00

Subject: RECENT FINDINGS IN 1500 CASES OF PERIAPICAL PATHOLOGY
Essayist: SURINDER N. BHASKAR, D.D.S., B.S., Ph.D., Chief, Dept. of Dental and Oral Pathology, Walter Reed Army Institute of Research, Washington, D.C.

Synopsis: This is a survey of more than 1500 cases of periapical lesions, the tissues having been sent for histologic examination by members of the A.A.E. This paper will deal with the relative incidence of various types of periapical lesions, their age and sex distribution as well as their preferred site in the jaws. Histologic features of the lesions and the mechanisms involved in their growth or repair will be discussed. In addition some unusual and hereto-fore undescribed lesions observed in apical areas will be described.

LUNCHEON
Palladium Room
12:15-2:00 LUNCHEON WITH LEARNING
LONNIE C. SIBLEY, D.D.S., Chairman

FRIDAY AFTERNOON
Terrace Banquet Room
Moderator: MILTON GREENBERG, Youngstown, Ohio
2:00-2:30
Subject: ENDODONTICS WITHOUT SILVER POINTS

Synopsis: The object in filling a root canal is to seal the apical foramen against the ingress of tissue fluid. This important requirement cannot be accomplished between two incompressible parts, e.g., a silver point and the canal walls. Gutta percha is a compressible material and has the required physical properties to produce an efficient seal. A technic is given to overcome the mechanical difficulties which previously limited the use of gutta percha in constricted canals.

2:30-3:00
Subject: TOOTH DISCOLORATION—ITS CLINICAL SIGNIFICANCE
WALTER P. AUSLANDER, A.B., D.D.S., Chief of Endodontics, Beth Israel Hospital, New York, N. Y.

Synopsis: The crowns of teeth often show discoloration as a result of traumatic injury. Such discoloration is not a positive indicator of pulp devitalization. The proper use of time, radiographs, pulp-testing and clinical photographs provide many interesting facts of clinical significance in these cases.

3:00-3:45
Subject: INTENTIONAL REPLANTATION

Synopsis: This is a practical approach for salvaging posterior teeth which might otherwise need to be extracted, e.g. teeth with blocked canals, those in which a root canal instrument has broken, roots perforated laterally, etc. Ankylosis and resorption of the root surfaces is unlikely to occur. The root is re-attached by means of a viable periodontal membrane, if the tooth is kept in a sterile moist medium while out of the mouth during which time the natural or an artificial apical foramen is hermetically sealed. The essayist has practiced this procedure in selected cases for more than a decade with gratifying results.

3:45-4:00
Subject: MANAGEMENT OF WIDE OPEN CANALS WITH CALCIUM HYDROXIDE
Essayist: J. HENRY KAISER, D.D.S., Chairman, Dept. of Endodontics, Ohio State University, College of Dentistry, Columbus, Ohio.

Synopsis: The problem of pulpless teeth in the young patient with underdeveloped root apices presents a difficulty in management. Frequently, stimulation of the apical tissues by chemical means results in a calcification in this area. Cases will be shown demonstrating this calcification and closure in very young patients.
4:00-5:00
Subject: CYSTS AND CYST-LIKE DISEASES OF THE JAWS
Essayist: EDWARD V. ZEGARELLI, A.B., D.D.S., M.S. Director of the Divisions of Stomatology, School of Dental and Oral Surgery, Columbia University; Chairman Committee on Dental Research, Columbia University.
Synopsis: This lecture is a continuation of the morning presentation.

5:00-5:15
Subject: RADIOGRAPHIC TECHNIQUES FOR THE ENDO DENTIST
Synopsis: Routine radiographic techniques must be modified and adapted to fit situations peculiar to endodontics (rubber dam & clamp, protruding instruments from crown, open mouth, etc.).

SATURDAY MORNING, APRIL 18, 1964
Terrace Banquet Room
Moderator: SEYMOUR OLIET, Philadelphia, Pennsylvania
8:15-8:30 CORRELATED ENDODONTIC PERIODONTIC THERAPY
Motion Picture—SEYMOUR OLIET and SEYMOUR POLLACK, Philadelphia, Pennsylvania
8:30-9:00 DENS IN DENTE
Motion Picture—GEORGE FELDMAN, Brooklyn, New York
9:00-9:10 Subject: EXTERNAL ACCESS TO THE ROOT CANAL
Essayist: ABE SHINGORN, D.D.S.
Washington Hospital Center, Endodontist Washington, D. C.
Synopsis: Canals which are inaccessible through the pulp chamber can sometimes be approached by gaining
access through an opening cut on the external surface of the root.

9:10-9:30
Subject: MEASUREMENT OF INTRAPULPAL PRESSURE

Synopsis: A low compliance system has been devised to measure intrapulpal pressure in dogs; chronic implantation of an arterial catheter has permitted simultaneous measurement of systemic pressure. The results show that the tooth pressure reflects changes in arterial pressure over short periods of time. However, over extended periods, variations in intrapulpal pressure seem relatively independent of systemic pressure.

9:30-10:00
Subject: THE INTRACANAL USE OF A COMBINED CORTICOSTEROID AND ANTIBIOTIC TO PREVENT POSTOPERATIVE PAIN
Essayist: JOSE V. OYNICK, D.D.S., F.I.C.D.
University of Mexico, Mexico City, Mexico.

Synopsis: A definite difference in the subjective response of the patient has been observed, postoperatively, to biomechanical instrumentation in vital cases between those treated with the medication and the control cases.

10:00-11:00
Subject: THE BIOLOGIC POTENTIAL OF THE HUMAN PULP

Synopsis: Improved histopathological technics in increased availability of desirable human materials have permitted the development of a three dimensional appreciation for the pulp, the construction of a panoramic view of its various types and degrees
of response to local irritating factors, and the establishment of the sequence leading to complete resolution of pulpal lesions. With such material, a greater knowledge and understanding of how the pulp tissues cope with disease and injury have become possible.

11:00-12:00
Subject: SURGICAL PRINCIPLES AS APPLIED TO ENDODONTIC PROCEDURES

Synopsis: Regardless of the type surgical problem encountered, certain cardinal principles must be followed to insure successful completion of the procedure. This presentation will stress the importance of such principles as preoperative evaluation of the patient, management of acute infection, access to the operative field, indications and requirements of a soft tissue flap, indications and use of antibiotics, newer anesthetic agents and technics and the prevention of postoperative complications.

SATURDAY AFTERNOON

Moderator: RAYMOND L. HAYES, Washington, D. C.
1:30-2:00
Subject: FURTHER STUDIES ON DENTINE PERMEABILITY

Essayist: F. JAMES MARSHALL, D.M.D., M.S., Associate Professor, Oral Biology (Endodontology & Oral Histology), The University of Manitoba, Winnipeg, Canada.

Synopsis: Bacterial cultures were placed in the root canals of sterile extracted teeth. The teeth were suspended in culture media and the permeability of the roots was determined by the growth of bacteria in the media covering the cementum surfaces. Various tracer solutions were employed.
2:00-3:00
Subject: CLINICAL ROENTGENOLOGIC AND PATHOLOGIC CORRELATIONS IN PERIAPICAL LESIONS

Essayist: SURINDAR N. BHASKAR, D.D.S., B.S., Ph.D., Chief, Dept. of Dental and Oral Pathology, Walter Reed Army Institute of Research, Washington, D. C.

Synopsis: This lecture is based upon the correlations observed in a series of almost 1500 cases of periapical lesions. It is a continuation of the lecture entitled "Recent Findings in 1500 cases of Periapical Pathology." The relationship between x-ray appearance and histologic findings of these lesions, the rationale for therapy for all periapical radiolucencies and the treatment of cystic lesions without apical curettage will be discussed.

3:00-3:30
Subject: THE PROTECTIVE RESTORATION—THE FINAL STEP IN OUR ENDODONTIC PROCEDURES

Essayist: ALFRED L. FRANK, D.D.S., Instructor, Endodontics Department, University of Southern California School of Dentistry, Los Angeles, California.

Synopsis: Our obligation in endodontics goes much farther than returning the apex to a pathosis-free state. The restoration of the individual pulpless tooth demands special consideration and should be considered a part of the endodontic procedure.

3:30
21st ANNUAL BUSINESS MEETING
Presiding: DR. JAMES H. SHERARD, JR., Atlanta, Georgia

Palladium Room
6:30 COCKTAIL HOUR
7:00 ANNUAL BANQUET AND INSTALLATION OF OFFICERS
COCKTAIL HOUR
SATURDAY, APRIL 18

Palladium Room
6:30 P.M.

BANQUET
and
INSTALLATION OF
OFFICERS
7:00 P.M.

Entertainment:
SHEAREN ELEBASH
**SUNDAY MORNING, APRIL 19, 1964**

**Terrace Banquet Room**

**Moderator:** F. Daryl Ostrander, Ann Arbor, Michigan

**8:15-9:00**  
**ENDODONTICS: NON SURGICAL TREATMENT MOTION PICTURE**

**9:00-9:10**  
**Subject:** A COMPLETE TECHNIQUE AND FOLLOW UP OF A HEMISECTION CASE

**Synopsis:** Treatment of a tooth which required hemisection on one of the roots of a multirooted tooth is discussed from initial diagnosis through to completed healing and eventual incorporation as part of a restoration to restore the occlusion.

**9:10-9:40**  
**Subject:** A NEW METHOD OF OBTAINING ENDODONTIC CULTURES COMPARED TO TWO OTHER METHODS

**Essayist:** D. A. Meinig, D.D.S., Lecturer, Northwestern University, Dental School, Chicago, Illinois.

**Synopsis:** A comparison of the results of consecutive cultures taken by three different methods; one method is a new approach and results show this technique to be more accurate than the other two. An adjunct to treatment based upon the new culture technique will also be discussed.

**9:40-11:30**  
**Subject:** PHARMACOLOGIC BASIS FOR THE MANAGEMENT OF THE ENDODONTIC PATIENT

**Essayist:** Herbert J. Bartelstone, B.S., D.D.S., Ph.D., Assistant Professor of Pharmacology, College of Physicians and Surgeons, Columbia University, New York.

**Synopsis:** A relatively brief discussion of the pharmacological basis of dental therapeutics; pharmacological and thermodynamic considerations involved when local

anesthetics are used; pharmacological basis for use of Central Nervous System depressants; discussion of drugs which raise the threshold of perception of pain and modify the patient's reaction to pain; a short critique of the usual use of antibiotics.

West Ballroom
11:30-1:30  TABLE CLINICS

GROUP TABLE CLINICS

1. HOWARD UNIVERSITY
   College of Dentistry
   Washington, D. C.
   RAYMOND L. HAYES, D.D.S.
   Head, Dept. of Oral Medicine

   Table Clinic #1
   "PROTECTION OF POST SURGICAL BLOOD CLOT WITH PALATAL SPLINT"
   DANIEL AREFIAN, D.D.S.
   KHADOBAKSH SALAMAT, D.D.S.

   Table Clinic #2
   "DRUGS AND MEDICAMENTS USED IN ENDODONTICS"
   RAYMOND L. HAYES, D.D.S.
   WILMORE B. LEONARD, D.D.S.

   Table Clinic #3
   "SURGICAL TREATMENT OF TEETH WITH PERIAPICAL LESIONS"
   GEORGE W. WADE, D.D.S.

2. UNIVERSITY OF MARYLAND
   Schlool of Dentistry, Baltimore, Maryland
   IRVING ABRAMSON, D.D.S.
   Associate Professor, Oral Medicine
   Head, Dept. of Endodontics

   "VISUAL AIDS IN THE TEACHING OF ENDODONTICS"
   (Models and appliances used in the laboratory, lecture hall and television teaching, and patient education.)
   IRVING ABRAMSON, D.D.S.
   J. PHILLIP NORRIS, D.D.S.
INDIVIDUAL TABLE CLINICS

1. S. JAMES MATSURA, D.D.S.
   Asst. Professor of Endodontics
   University of Detroit, School of Dentistry
   Detroit, Michigan
   
   "A SIMPLIFIED ROOT-END TECHNIC USING
   SILVER AMALGAM"
   (A technic for the following problems: (a) Failure of
   previously filled canals, (b) Broken instruments, (c)
   Calcified canals, and (d) Perforation of Roots.)

2. LEO BOTWINICK, D.D.S., F.A.C.D.
   Consultant, Endodontics, U. S. Public Health Service,
   Washington, D. C., Great Neck, New York
   
   "RETREATING OUR FAILURES"
   (Unsuccessfully treated endodontic cases need not be
   given up as hopeless. Techniques may vary from simple
   treatment to heroic surgical procedures.)

3. WALTER P. AUSLANDER, D.D.S.
   Chief, Endodontics, Beth Israel Hospital
   New York City, New York.
   LEON SCHERTZER, D.D.S.
   Beth Israel Hospital
   New York City, New York.
   
   "MODERN ANSWERS TO SOME RECURRENT
   ENDODONTIC PROBLEMS"
   (Rational proper treatment of the acute abscess; when
   and why to instrument beyond the apex; thoughts on
   root canal fillings.)

4. SEYMOUR OLIET, D.D.S.
   Asst. Professor, Oral Medicine
   University of Pennsylvania, School of Dentistry,
   Philadelphia, Penna.
   SEYMOUR POLLACK, B.A., D.D.S.
   Associate in Periodontia, Graduate School of Medicine
   University of Pennsylvania
   Philadelphia, Penna.
   
   "CORRELATED ENDODONTIC-PERIODONTIC
   THERAPY"
   (Narrated movie shown at New York Meeting in
   December and Greater Philadelphia Meeting in March.
   Shows various procedures and technics in treatment of
   combined endodontic-periodontic problems.)
5. Samuel Luks, D.D.S.
Chief of Endodontics,
Bronx Lebanon Hospital Centre
Bronx, New York

"HOW TO FILL ROOT CANALS WITHOUT SILVER POINTS"
(A technique for filling teeth with the use of 'finger' pluggers and gutta percha.)

6. Marvin N. Forman, D.D.S.
Endodontist, Mt. Sinai Hospital
Cleveland, Ohio

"WHAT OCCURS BETWEEN THE 'BEFORE AND AFTER' PICTURES IN THE DIFFICULT AND UNUSUAL ENDODONTIC CASES"

LDS Primary Children's Hospital
Salt Lake City, Utah

"RAPID COMFORT FOR THE EMERGENCY PATIENT"

Lecturer in Post Graduate Endodontics, Australian Dental Association, Melbourne, Australia

"CORTICOSTEROIDS IN OPERATIVE DENTISTRY"
(Corticosteroids with an antibiotic added are used for desensitizing freshly cut dentine, pulp capping, hyperaemia, and pericementitis. Preliminary findings of the Melbourne Endodontic Study Club will be presented for evaluation.)

9. Charles E. Rudolph, Jr., Captain (D. C.) USN
Head, Endodontics, Dental Dept., USN Training Center
San Diego, California

Marvin H. Scott, Commander (D. C.) USN
Head, Endodontics, Dental Dept., U. S. Naval Station
San Diego, California

"SILVER POINT TECHNIQUE PRECEILING DOWEL RESTORATION"
(A method of root canal preparation and filling which lends itself to subsequent dowel preparation without jeopardizing the apical seal.)

"ARTIFISTULATION"
(A method of avoiding post-filling discomfort and surgical risk following one-sitting endodontic therapy by prophylactic "venting" of the perialpal region.)
EXHIBITS

Subject: PROFOUNG PULPAL ANESTHESIA
Clinician: LEONARD PARRIS, Temple University

Subject: PROTECTIVE CORONAL COVERAGE OF THE PULPLESS TOOTH
Clinician: ALFRED L. FRANK, Los Angeles, California

Subject: A TECHNIQUE FOR HEMISECTION
Clinician: ROBERT A. UCHIN, Fort Lauderdale, Florida

Subject: CORTICOSTEROIDS AND ANTIBIOTICS COMBINED TO ALLEVIATE PULPAL PAIN—A SURVEY OF 500 CASES
Clinician: E. H. EHRMANN, Melbourne, Australia

Subject: ATYPICAL ROOT CANAL FILLINGS
Clinician: SEYMOUR MELNICK, Boston University

Subject: SEALING OF STAINLESS STEEL FILES IN ROOT CANALS
Clinician: ADRIAN J. SAMPECK, Dallas, Texas

LUNCHEON WITH LEARNING

DISCUSSOR
Irving Abramson
M. B. Auerbach
Walter P. Austonder
I. B. Bender

TOPIC
1. traumatic injuries
2. periodontal - endodontal relationships
3. hemisection

Specialty Practice—Managing a practice limited to endodontics

1. empirical endodontic fallacies concerning:
   a) acute and subacute abscess
   b) internal and external resorption
   c) traumatic discoloration
   d) filling materials
   e) periapical areas, large and small

1. pulp and periapical reactions to various procedures
2. the role of infection
3. failures in endodontics
N. Weir Burkman
1. preventive endodontics (research)
2. restorations of pulp-involved teeth
3. something new in pulp capping (research)

E. H. Ehrmann
1. Dangers associated with the use of N-2 in endodontics and an evaluation and a case history where N-2 extruded into the mandibular canal caused a paraesthesia.
2. The utilization of non vital teeth in the retention of partial dentures by means of precision attachments.
3. The use of "apicoflux" in the treatment of large periapical areas.

J. A. Englander
1. clinical aspects of filling root canals with gutta percha
2. clinical aspects of diagnosis of pulp involvement with particular emphasis on x-ray findings and pulp testing

L. Irving Epstein
1. problem situations in endodontics
2. traumatic injuries in the young permanent tooth
3. speeding up the endodontic "sitting"

Alfred L. Frank
1. Restoring the pulless tooth to junction.
2. The over extended ticonium point as a periodontal splint or as a means of improving the crown root ratio.
3. Experimental efforts to effect a closing of the wide open pulless tooth allowing conservative therapy rather than surgical intervention.
4. Perio and endo combined therapy.

J. B. Freedland
1. systemic factors in endodontic therapy

Harold Gerstein
1. endodontic surgery—anterior and posterior hemisection and resection
2. precision dowels—premeasured and prefitted
3. non-textbook technics for tight canals

David Green
1. mechanics as applied to pulp cavity morphology
2. general considerations in endodontics
Leo Grudin
1. When should endodontics start at a University level?
2. What should an endodontic course include?
3. Should there be a standardization of teaching methods?

J. Henry Kaiser
1. implantation of luxated teeth
2. treatment of wide open canals with partially degenerated pulps

F. J. Marshall
1. Patient history and its relevance.
2. Antibiotics, medications and contraindications.

C. G. Maurice
1. to culture or not to culture in endodontic treatment
2. disinfection and sterilization of endodontic instruments and materials
3. root canal filling: materials, methods, technique
4. the standardization of root canal instrument size and its impact on endodontics
5. causes of treatment failures

Richard M. Moodnik
1. histopathology of pulp; pulp reactions to operative procedures
2. endo-periodontal problems
3. recent findings of research project comparing N-2 and standard endodontic procedures
4. surgical endodontics

Nguyen Thanh Nguyen
1. bleaching of all types of discolored and stained teeth
2. re-treatment of endodontic failures—accidents, perforations, broken instruments, etc.
3. reverse (retrograde) root canal filling technique and materials—management of the everted canals

Seymour Oliot
1. integrated perio-endo therapy
2. sterilization of armamentation
3. to culture or not to culture

Leonard N. Porris
1. clinical endodontic procedures
   a) profound pulpal anesthesia
   b) radiographic techniques
   c) root canal filling
